

## TOP BOX MOUNTING INSTRUCTIONS

### PURPOSE OF THE INSTALLATION GUIDELINES

To provide the information needed for proper installation of a top box by a professional.

Faulty installation may be dangerous and may invalidate any warranty which may apply to this top box.

This is a general guide to give you the basics on how to install your New Top Box. However, due to the wide variety of vehicles and mounting racks types and models, this guide cannot consider the individual technical requirements relevant to any particular vehicle.

It is very important that you check inside your box for all parts. All our top box models include necessary hardware to install them in almost any Motorcycle or Scooter equipped with a mounting rack.

### Included Hardware:

- 1) Mounting Base Plate
- 2) Brackets
- 3) Nuts, Washers, and Screws

### MOUNTING YOUR BOX

- 1) Place the mounting plate in place where you want to install your new box. It might be necessary to drill some holes in order to line your mounting plate with your mounting rack.

*Note: make sure that once installed the box will not cover the gas cap, and that the seat will open.*

- 2) Attach the plate to the rack with included brackets, Nuts, Washers, and screws.
- 3) Remember that this DIY system bolts right to the mounting rack; you will have to adjust the installation procedure to meet your needs.
